Getting started with 8D Navigator

Your knowledge, in your own words. No internet, no account – nothing leaves your computer.

1 Open it

Right-click the zip file → Extract All. Open the new folder and double-click “8D Navigator”. The first time, Windows may say “Windows protected your PC”: click More info → Run anyway.

2 Press Continue

You see one question at a time, in large letters. You can stop whenever you like – next time, Continue takes you back to the same place.

3 Talk or type

Press Record and simply talk for 1–3 minutes, then Stop. Your words appear as text after a short while – this happens on your computer, nothing goes online. Correct anything you like, or type. (Avoid Windows key + H: Windows' own dictation may send your voice to Microsoft.) Then press Next.

4 Make the documents

When a topic is done, the app shows your text with every small change marked (red = removed, green = spelling). Undo any change you don't want, then press Create Word and PDF. Your files are in Documents\8D Navigator Drafts.

5 Share them – only when you decide

Upload the file on 8dnavigator.com/admin (Fájlok és képek → Feltöltés, then Erőforrások), or send it to anyone. If the app says your folder is synced to OneDrive, click “Keep on this computer only”. Backup makes one zip (with a password if you like) – keep a copy on a USB stick.
